# SELPHY QX20
## COMPACT PHOTO PRINTER

# PREMIUM PRINTS ON THE MOVE

**SELPHY QX20 offers unparalleled versatility and convenience so creative enthusiasts can print high-quality photos in multiple formats on the move, directly from their smartphones.**

**Dye-Sub** Dye Sublimation Printing

**100 YEARS PRINT** 100 Year Print

**Card Size** XC-20L/XC-60L Photo Paper

**Square Format** XS-20L Square Photo Paper

**Wi-Fi Printing** Wi-Fi

**USB Charging** USB-C Charging

### Versatile printing in two sizes

Find the right fit for your creative project with a mobile photo printer compatible with two different paper sizes. Make square and card size prints with XS-20L and XC-20L/XC-60L.

### Personalise, peel and stick

Add a unique finishing touch to your arts and crafts projects - two different sizes of sticker-backed photo paper mean it's easier than ever to add a personal flourish.

### Beautiful results that last a lifetime

Preserve memories with dye sublimation printing, which transfers dye to paper via three passes of cyan, yellow and magenta. An overcoat is added so they'll last up to 100 years.

### Print whenever and wherever you are

SELPHY QX20 fits in a handbag or backpack, with a built-in battery for portable printing. Create vibrant prints of your special memories at a moment's notice thanks to Wi-Fi connectivity.

### Get creative with the SELPHY Photo Layout app

Print via Canon's free app and enjoy adding artistic touches such as stamps, filters, borders and text. The latest update includes collages, frames and customisable borders.

| **Dimensions** | Approx. 102.2 x 145.8 x 32.9 mm |
| **Weight** | Approx. 455g (excluding ink cartridge and label) |

**Disclaimers**
- All data is based on Canon's standard testing methods.
- Subject to change without notice.

**Footnotes:**

[1] To test the image permanence of prints that are stored in an album, we use an accelerated testing method similar to how the image permanence of silver-halide photo papers are measured when stored in dark places. Print samples are printed with the optical density of 1.0 (each Bk, C, M,Y). The samples are kept in a certain environment of high temperature and 50% humidity. The rate of the decrease in the optical density and rate of yellow discoloration are recorded. The recorded results are then converted to the length of time when print image is kept in an environment of 23℃/ 50% humidity. <Criteria for estimation of print longevity> 'The point where monochromatic/ reflective optical density shows loss of 30% (starting density of 1.0).

[2] Print speed can vary dependent on data size, print method, and print finish setting. Print speed is measured from start of printing excluding paper handling
